

The `pst-pdf` package^{*}

Rolf Niepraschk[†] Hubert Gäßlein

2020/10/10

1 Introduction

The package `pst-pdf` simplifies the use of graphics from PStricks and other PostScript code in PDF documents. As in building a bibliography with `BIBTEX` additional external programmes are being invoked. In this case they are used to create a PDF file (`\PDFcontainer`) that will contain all this graphics material. In the final document this contents will be inserted instead of the original PostScript code.

2 Usage

2.1 Package options

active Activates the extraction mode (DVI output). An explicit declaration usually is not necessary (default in `LATEX` mode).

inactive No special actions; only the packages `pstricks` and `graphicx` are loaded (default in `VTEX`). Can be used to just convert the document with `LATEX` into a DVI file while avoiding the automatic extraction mode.

pstricks The package `pstricks` is loaded (default).

nopstricks The package `pstricks` does not get loaded. Once it is detected that `pstricks` was loaded however in some other way, the `pspicture` environment is treated as if the option “`pstricks`” was given.

draft From the `\PDFcontainer` file included graphics is displayed as frame in `pdfLATEX` mode.

final From the `\PDFcontainer` file included graphics is correctly displayed in `pdfLATEX` mode (default).

tightpage The graphics’ dimensions in the `\PDFcontainer` file match exactly those of the corresponding `TeX` boxes (default).

notightpage The dimensions of the `TeX` box corresponding to its graphics is not always correct, since a PostScript statement can draw outside its box. The option “`notightpage`” makes the graphics in the `\PDFcontainer` file to be at

^{*}This document corresponds to `pst-pdf` v1.2f, dated 2020/10/10. Thanks to Peter Dyballa for the translation.

[†]Rolf.Niepraschk@gmx.de

least the size of the whole page. To be able to make use of the graphics' in a later pdfL^AT_EX run, the \PDFcontainer file needs to be finished in a way that each graphics gets reduced in size to its visible part. For this an external programme like `pdfcrop`¹ can be useful. Its use can save declaring the option "trim" (see also section 2.4).

displaymath In PDF mode the mathematical environments `displaymath`, `eqnarray`, and `$$` get also extracted and included as graphics. This way additional PStricks extensions can easily be added to the contents of these environments. (Question: how do AMSL^AT_EX environments behave?)

⟨other⟩ All other options are passed to `pstricks` package.

2.2 Program calls

The following table shows the course necessary to create a PDF document containing PostScript graphics². As comparison the analogous course for a bibliography is shown.

PostScript graphics	bibliography
<code>pdflatex document.tex</code>	<code>pdflatex document.tex</code>
<i>auxiliary calls</i>	
<code>latex document.tex</code>	
<code>dvips -o document-pics.ps document.dvi</code>	
<code>ps2pdf document-pics.ps</code>	<code>bibtex document.aux</code>
<code>pdflatex document.tex</code>	<code>pdflatex document.tex</code>

While creating the output only code from inside a `pspicture` or `postscript` environment is considered. PostScript graphics files, which are passed as parameter of an `\includegraphics` statement, too are included into the `\PDFcontainer` file. This file's name is by default `(\jobname)-pics.pdf`. It can be changed by re-defining the macro `\PDFcontainer`.

2.3 User commands

`pspicture` `\begin{pspicture}[(keys)] ((x0,x1))((y0,y1)) ... \end{pspicture}`
 The `pspicture` environment is not available when the option "nopstricks" was given. It is to be used the same way as if in PStricks. In pdfL^AT_EX mode this environment's contents is only displayed when the `\PDFcontainer` file was created before.

`postscript` `\begin{postscript}[(keys)] ... \end{postscript}`
 The `postscript` environment can contain any code except floats. In pdfL^AT_EX mode its contents is take too off the `\PDFcontainer` file. Other as in the `pspicture` environment the necessary space is not always preserved when the `\PDFcontainer` file does not exist yet.

`\includegraphics` `\includegraphics[(keys)]{\filename}`

¹CTAN: `support/pdfcrop/`

²The TeX distribution "teTeX" contains a UNIX shell script `ps4pdf` which executes all the necessary steps. See: CTAN: `macros/latex/contrib/ps4pdf/`

To be used as in `graphics/graphicx` defined. In pdfL^AT_EX mode it is now additionally feasable to pass the name of an EPS file. Its visible contents too is taken from the `\PDFcontainer` file.

<code>\includegraphicx</code>	<code>\includegraphicx[⟨keys⟩] (⟨pxfadd⟩) <⟨ovpfgd⟩⟩ [⟨ovpbgd⟩] {⟨filename⟩}</code> To be used like defined in package <code>psfragx</code> .
<code>\savepicture</code>	<code>\savepicture{⟨name⟩}</code> The last output graphics (result of the <code>pspicture</code> or <code>postscript</code> environments or the <code>\includegraphics</code> statement with an PostScript file as argument) is being saved in a file under the name as given by the parameter.
<code>\usepicture</code>	<code>\usepicture[⟨keys⟩]{⟨name⟩}</code> The graphic previously stored with <code>\savepicture</code> is outputted. The optional parameter corresponds to <code>\includegraphics</code> .
<code>pst-pdf-defs</code>	<code>\begin{pst-pdf-defs} ... \end{pst-pdf-defs}</code> For defining macros or environments, which contain character & (others?) in the output, these defintions have to be wrapped with environment <code>pst-pdf-defs</code> .

2.4 Command options

The behaviour of the `\includegraphics` and `\usepicture` statements and the `postscript` environment can be modified with any of the following parameters (key value syntax):

frame=⟨true|false⟩ As with the `\fbox` statement a frame is drawn around the graphics. Any change of size due to rotation is taken into account. Drawing happens in pdfL^AT_EX mode; before, in creating the `\PDFcontainer` file, it is ignored. Default: false.

innerframe=⟨true|false⟩ As in “`frame`”, but the frame is drawn around the graphics, not its box.

ignore=⟨true|false⟩ If set to “`true`” no graphics are outputted. With macro `\savepicture{⟨name⟩}` the graphics can be used later in a different place via `\usepicture`. Default: false.

showname=⟨true|false⟩ A caption of minimal font size records the used file’s name. Default: false.

namefont=⟨font commands⟩ Controls the font used when “`showname=true`” is set. Default: `\ttfamily\tiny`

All parameters can be set globally as in `\setkeys{Gin}{⟨key=⟨value⟩⟩}`.

3 Implementation

¹ ⟨*package⟩

3.1 Package options

² `\newcommand*{\ppf@TeX@mode}{-1}`
³ `\newcommand*{\ppf@draft}{false}`

```

4 \newif\if@ppf@PST@used\@ppf@PST@usedtrue
5 \newif\if@ppf@tightpage \@ppf@tightpagetrue

16 \DeclareOption{notightpage}{\@ppf@tightpagefalse}%
17 \DeclareOption{tightpage}{\@ppf@tightpagetrue}%
18 \DeclareOption*{%
19   \PassOptionsToPackage{\CurrentOption{pstricks}}}
20 \ProcessOptions\relax
21 \ifnum\ppf@TeX@mode=999\relax\expandafter\endinput\fi

```

3.2 Compiler tests

It is tested which \TeX compiler in which mode of operation is actually used (see ‘`graphics.cfg`’ in `teTeX/TeX Live`). Accordingly the environments `pspicture` and `postscript` gain each a different range of functions. This test is only executed when the options `active` or `inactive` were not given.

```

22 \RequirePackage{ifpdf, ifxetex, ifvtex}
23 \ifnum\ppf@TeX@mode=-1\relax
24   \ifpdf
      ⇒ pdftEX or LuaTeX are running in PDF mode

73   \endgroup
74   \if@ppf@pdftex@graphic#4\else#5\fi
75 }

76 \ifcase\ppf@TeX@mode\relax

```

3.3 Extraction mode (DVI output)

The `pspicture` environment retains any definition from `pstricks.tex`. Only the code from the environments `pspicture` and `postscript` as well as `\includegraphics` with PostScript files leads to records into the DVI file. The remainder of the document's code is ignored for output. After conversion of the DVI file via PostScript ("dvips") into PDF (`\PDFcontainer` file) each graphics takes exactly one page in the `\PDFcontainer` file. The `TeX` compiler with DVI output and the package option "active" both force this mode.

```

77  \PackageInfo{pst-pdf}{%
78    MODE: \ppf@TeX@mode\space (dvi -- extraction mode)}%
79  \nofiles
80  \let\makeindex\empty \let\makeglossary\empty \let\printindex\empty

Change History

v1.0a		v1.0g
General: Initial version.	1	<code>\usepicture</code> : Now <code>\usepspicture</code> does accept a numerical parameter. (RN)
v1.0b		13
General: Some code and documentation cleaning. (RN) .	1	General: Definition of <code>\PDFcontainer</code> now with <code>\edef</code> . (RN)
v1.0c		4
General: New options “ <code>pstricks</code> ”, “ <code>nopstricks</code> ”, “ <code>draft</code> ” and “ <code>final</code> ”. (RN)	3	<code>\psmatrix</code> : Based no more on the comment environment from the <code>verbatim</code> package. (RN)
v1.0d		12
General: Redefinition of <code>\includegraphics</code> in modes 0 und 1. Now using of eps graphics directly in pdfL <small>A</small> T <small>E</small> X is possible. (RN)	1	v1.0i
v1.0e		
<code>postscript</code> : “ <code>trim</code> ” option added. (RN)	7	<code>\ppf@is@pdfTeX@graphic</code> : No more errors for given files without extensions. (RN)
v1.0f		5
<code>\savepicture</code> : New macro <code>\savepspicture</code> . (RN)	13	v1.0j
<code>\usepicture</code> : New macro <code>\usepspicture</code> . Useful for putting a PSTricks graphic in a box or something else. (RN) .	13	General: Check <code>AtBeginDocument</code> for package ‘ <code>pstricks</code> ’ even if “ <code>nopstricks</code> ” is given. (RN)
General: Config file loading added. (RN)	15	For <code>\includegraphics</code> <code>\usepicture</code> and <code>postscript</code> the new options “ <code>frame</code> ”, “ <code>framesep</code> ”, “ <code>framerule</code> ”, “ <code>linewidth</code> ”, and “ <code>ignore</code> ” added. (RN)
		v1.0k
		<code>\Gin@setfile</code> : Show also the pagenumber if exists. (RN)

\Ginclusion@graphics: Prevent		Special support for “tabularx”.	
division by zero. (RN)	8	(RN)	8
v1.0l		Supress handling of pdfL ^A T _E X	
General: Options “framesep”,		graphic formats in DVI mode.	
“framerule”, “linewidth”		(RN)	6
removed, “fname” and			
“innerframe” added. (RN)	1		
v1.0m		v1.1d	
General: New package option		\postscript: Support for PSTricks	
“notightpage” added. (RN)	1	environment “psmatrix”. (RN)	13
v1.0n		v1.1e	
General: Changed macro names		General: New option “displaymath”	
(\savepicture and		(see preview package).	
\usepicture). (RN)	1	(HjG/RN)	3
Some code cleaning. (RN)	1	v1.1f	
v1.0o		General: Package option “ignore”	
General: New code for		reimplemented. Now the	
“notightpage”. (RN)	6	compilation of the dtx file in	
Option “fname” renamed to		L ^A T _E X mode is possible. (RN)	3
“showname”. (RN)	1		
v1.0p		v1.1g	
General: Some code and		\postscript: “psmatrix”	
documentation cleaning. (RN)	1	environment (preserve math	
v1.0q		mode). (RN/HjG)	13
\usepicture: Now \usepspicture		pspicture: pspicture environment	
works for all kind of graphics.		must still parse its arguments.	
(RN)	13	(RN/HjG)	12
v1.0r		v1.1h	
\ppf@is@pdfTeX@graphic:		\Ginclusion@graphics: Check if	
Changed		inside of a PS-related	
\ppf@is@known@graphic to		environment (correct graphic	
\ppf@is@pdfTeX@graphic.		inclusion). (RN)	8
Now pdfL ^A T _E X graphics are		v1.1i	
prefered. (RN)	5	\Ginclusion@graphics: Correction	
v1.0s		of the inside check. (RN/HjG)	8
\Gin@ii: Rewritten. (RN)	11	General: \ifpr@outer must be	
General: Scaling e.g. of PostScript		predefined. (HjG/RN)	5
pictures now only in extraction		Package option “final” also for	
mode. Some code cleaning.		“graphicx”. (RN)	4
(RN)	1	v1.1k	
v1.1a		General: New environment	
General: Support for the internal		pst-pdf-defs: Support for	
PSTricks macro \pst@object.		PSTricks environment	
(HjG/RN)	8	“psmatrix” inside user	
v1.1b		definitions. (RN,HjG)	1
General: Ignore the call of		v1.1l	
\nofiles inside of preview.		General: Support for the package	
(RN)	9	“psfragx”. (RN)	8
Some code and documentation		v1.1m	
cleaning. (RN)	1	General: Merge english and	
v1.1c		german version of the	
General: New package option		documentation. (RN)	1
“tightpage” added. (RN)	1	v1.1n	
		General: \nofiles added	
		(suggestion of Torsten	
		Broniger).	6

v1.1o	\Gscale@@box: Disable scaling. (RN)	8	v1.1v	\Gin@ii: Key settings only for pdf graphics. (RN)	11
v1.1p	General: \let\output@gobble before loading of “preview” added. (RN)	9	v1.2a	General: Local redefinition of \pdfoutput to be a counter. (RN)	6
	\nofiles makes \makeindex and \makeglossary to \relax. \@empty is better because of later \renewcommand’s.	6	v1.2b	General: Engine tests changed (RN)	4
v1.1q	General: Problem with “tabularx” and “threeparttable” solved. (RN)	8	v1.2c	General: Loading packages ‘if*’ at wrong place (RN)	4
v1.1r	General: Fixed values for \PreviewBbAdjust because \paperwidth is not always defined (suggested by Will Robertson).	6	v1.2d	General: “postscript” environment no more allowed before \begin{document} (changed example file).	1
v1.1s	General: Dummy definition of the page key in DVI mode.	6	v1.2e	General: \color@to@ps must not be undefined before loading 'PSTricks'	9
v1.1t	General: Remove the line “\let\output@gobble” because of bad side effects. (RN)	9		Version parameter for ‘graphicx’ and rename \GPT@page to \Gin@page at several places . . .	5
	\postscript: Using environ the environment postscript is now simple and more robust. (RN)	13	v1.2f	\ppf@is@pdfTeX@graphic: Parameter #2 is detokenized when expanded to \pdfText . .	5
v1.1u	General: \pdfoutput must be set when loading “pdftex.def” in DVI mode. (RN)	6		General: gobble optional argument for \makeindex, \makeglossary and \printindex	6
				General: No more loading of file 'dvips.def' (RN)	10
				No more loading of file 'pdftex.def' (RN)	6
